COURSE DESCRIPTION:

This is an introduction to laboratory techniques and experiments that illustrate and apply basic physics principles presented in lecture. Students will have the opportunity to apply the scientific method in collecting and analyzing data.

COURSE OBJECTIVES:

Upon successful completion of the course, students will be able to:

- Make careful measurements of physical quantities.
- Estimate the uncertainties and demonstrate a knowledge of statistical analysis.
- Present results graphically and make calculations using a computer when appropriate.

EVALUATIONS AND GRADING SCALE:

Worksheet Lab Reports (15) 70%
Quizzes 30%

90% – 100%	A
80% – 90%	B

LAB REPORTS:

There are fifteen labs during the semester. They will be in the form of worksheets and should be completed in class and turned in at the beginning of the next class

Although students will work in groups on experiments, lab assignments are individual preparations. Each student is responsible for their own interpretation of results.

QUIZZES: We will have a short quiz at the beginning of each lab (5-10 minutes). The quiz will be based on your understanding of the previous weeks lab. No make-up quizzes will be given. At the end of the semester I will drop your lowest quiz score.

ATTENDANCE:

Each students is expected to attend every lab. Arrive on time. Makeup labs will only be given under extenuating circumstances beyond the student's control. If a student knows in advance of an absence, inform the instructor as soon as possible.
